

Dear Sirs, I am an active user of XM Satellite Radio and cannot say enough good about this service. I live in a rural area where we do not have a variety of radio programming. I enjoy talk radio, as well as, news service. XM affords me the ability to listen to these services at any time while traveling.

The ability to access instant travel and weather information is a tremendous benefit also. This saves many hours of travel, gallons of fuel, and the weather reports most definitely save lives.

As a subscriber, I pay for these services and do not feel that the National Association of Broadcasters have the right to determine what I have the right to hear.

I urge you to reject NAB's petition 04-160.

Thank you for you consideration,

Johnny Bellis
